

THE CORRECT WAY TO START YOUR PRINTERS, SERVER AND WORKSTATIONS:

To avoid problems make sure to follow this exactly as stated.

The PRINTERS must be turned on in numerical order.

STEP ONE: First turn on 'PRINTER ONE' and wait for it to completely start. Then do the exact same thing with 'PRINTER TWO' and wait for it to completely start. Then do the exact same thing with 'PRINTER THREE, and wait for it to completely start. If you have more printers do the same thing with every printer you have. After the printers are started we are ready for Step Two.

STEP TWO: Go over and turn on the SERVER. After the 'Server' is completely started, you can then START 'PAWN POWER'. Wait for about two minutes and we are ready for Step Three.

STEP THREE: Now you can start the 'Workstations'. After they are started you can START 'PAWN POWER' on each workstation.
